Rx Fingertip

Fingertip and Vault: Work Report

Everything done on 7–8 November 2026, in plain words, with the technical details at the end.

Prepared for Sridhar Renukunta, Sri Vasudeva Medical Agencies, Karimnagar · 8 November 2026

The new button screens are **live** in Rx Fingertip for all five kinds of users. The Vault (GST accounts, bill photos, customer documents) is **live inside the Fingertip database**, linked to each shop. Bill photo reading is built and tested. One problem was found: sign-in emails hit a limit, and a fix is waiting for your choice.

5	623	99	425
user homes made buttons-only	app tests passing	Vault security checks passing	Fingertip security checks passing

1. At a glance

Part	What it is	Status
Button screens	Clean home pages with big buttons; all explanations on one Help page	Live rx-fingertip.lovable.app
The Vault database	GST accounts, bill photos and customer documents, shared by both apps	Live in the Fingertip database
Link to Fingertip shops	Each Fingertip shop is its own Vault business, with one staff list	Live
Vault screens in Rx Fingertip	GST invoice, bill photo reading, Profit & GST, shop documents	To build
Bill photo reading (OCR)	Reads a photo of a GST bill into the invoice form	Built, not online
Sign-in	Email code sign-in	Problem found fix not started
Fingertrip.biz AI	Phone app for any small business	Not changed yet

2. Your decisions

Decision	What it means
One Vault for both apps	No separate "Universal Customer Vault" product. The same Vault serves Rx Fingertip and Fingertrip.biz AI.
Put it in the Fingertip database	No new Supabase project (the free plan allows only two). The Vault has its own separate section.
"Link them"	A Fingertip shop and its Vault business are one, with one staff list kept in Fingertip.
"Don't revoke anything"	What is built stays as built. No security changes were made.
Buttons only, Help separate	Each user gets one page of buttons; explanations live on the Help page.
"Finish and publish"	All five homes were built, checked, merged and published.
Health records stay separate	Patient files remain in Rx Fingertip's stricter health store and connect to the Vault later.

3. The new buttons in Rx Fingertip (live)

Every user now opens to one page of big one-word buttons. A button opens its actions; an action opens the screen that does the job. The **Help** button at the top opens one page with every explanation.

User	Home buttons
Chemist (10)	Sell, Buy, Stock, Order, Patients, Money, Reports, Staff, Documents, Learn, plus medicine search
Patient (8)	My Records, Medicines, Order, Doctors, Hospitals & Labs, Emergency, Health Check, Health News, plus search
Distributor (7)	Orders, Chemists, Dues, Stock, Returns, Reports, Learn
Hospital (5)	Profile, Announce, Accounts, Videos, Referrals
Doctor (4)	Profile, Announce, Videos, Referrals

Chemist buttons and what they open

Button	Actions
Sell	Sales slip · Patient orders
Buy	Purchase bill · Distributor bills · Returns · Purchases & sales
Stock	Stock book · Products · Product photos · Check & confirm · Expiry · Special drugs
Order	Shortage list · Send & track orders
Patients	Read prescription · Pre-orders · Join poster
Money	Today & accounts · Dues
Reports	Stock report · Stock check
Staff	Attendance & advances
Documents	Prescriptions · My health
Learn	Doctors · Videos · Health alerts

- Nothing was lost: every screen people could open before is under a button, and old saved links still work.
- Buttons and actions not built yet stay hidden until they work (GST invoice, Profit & GST, shop documents and others).
- A patient's records, vital check and refills moved unchanged to their own "My records" page.
- "What needs attention", "Owner's observations" and "Share Fingertip" now show only to you, the owner.
- Plan and clickable model: claude.ai/artifact/75kocDRyfsofbuKJ4RgNiT

4. The Vault

The Vault is one shared part for both apps. It keeps a business's GST accounts and bill photos, and each customer's own documents.

Area	What it does
Customer documents	Bills, warranties, bookings and papers. A business can send documents to a customer only after the customer agrees with the business's 8-letter code. Sharing can have an end date and be taken back.
Business accounts	Sale invoices and purchase bills with GST checks (valid GSTIN, CGST = SGST, IGST vs same state, totals add up, duplicate numbers), payments, dues and overdue, cash and bank books, profit and loss, balance sheet, GST summary.
Personal accounts	Income and expenses for a person, kept separate from any business.
Bill photos	Kept in the business's own private folder; members only; cannot be deleted because they are proof for the books.
Approval	Staff can enter bills; only the owner or an admin can post them. Bills read from photos need a tick: "I checked these details against the paper bill".
Link to Fingertip shops	Each shop is its own Vault business. Fingertip's owner, admin and staff roles apply; removing someone in Fingertip ends their Vault access at once. The owner can add the shop's GSTIN.
Not in the Vault	Health records. Patient files stay in Rx Fingertip's stricter health store.

5. Reading bills from photos (OCR)

Tested on 27 sample GST bills damaged like phone photos: every amount, tax, total, GSTIN and date was read correctly, and 89% of bills were right in every field.

Kind of photo	Result
Clean, tilted, sideways, upside down, shadowed, phone-quality, PDF	All fields right
Blurred	Amounts right; words in names run together (a warning is shown)
Speed	About 4–5 seconds per photo; PDFs instantly

- Engines: PaddleOCR's reading models first, Tesseract as backup.
- Fixes made while testing: "lnvoice No" (a small L read for I) now found; upside-down bills fixed (0% to 100%); software versions locked so a new install reads the same way.
- Not yet tested on real paper bills; handwriting is only flagged; the reading service still has to be put online.

6. Safety

The database itself decides who sees what, so a mistake in the app cannot show one shop's data to another.

- Each person sees only their own documents; a business sees only its own records and what customers chose to share.
- Nobody writes to tables directly; every change goes through checked steps that confirm who you are and your role.
- Files are private and open only through links that expire within minutes.
- Accounts must balance; a posted entry cannot be edited, only reversed.
- Every action on a document is written to a history that nobody can change.
- Tested against unsafe copies of Fingertip's names: the Vault uses only its own checks.
- Supabase's security advisor shows no warnings for the Vault.

Left as built (your decision)	Note
Business-code check usable without sign-in	Shows a business name for a correct 8-letter code
"Automatically expose new tables" is on	Supabase recommends off; future tables need care
Leaked-password check is off	Matters little with email codes

Still to write before the pilot: two-step sign-in on Supabase, GitHub, Lovable and Meta; one tested backup; a short privacy note; what to do if something leaks.

7. Sign-in problem and the fixes

Sign-in codes stop arriving because Supabase's built-in email sender allows only a few emails per hour for the whole app. The logs show "email rate limit exceeded".

Message in the logs	Meaning
email rate limit exceeded	Main problem: codes are not sent once the hourly limit is used
Email link is invalid or has expired	Link used up or late; typing the 6-digit code avoids it
Error sending confirmation OTP to provider	Phone sign-in tried from a test app; no SMS service connected
Invalid login credentials	Password attempts from the same test app, not the live app

Option	What it fixes	Cost	Advice
A. Own email sender (Brevo or Resend)	Codes arrive reliably	Free tier	First
B. "Continue with Google"	One tap, no email to wait for	Free	Next
C. Code by WhatsApp	Uses the WhatsApp number	Small fee per message	Later
D. Code by SMS	Phone sign-in	Paid; slow approval in India	No

8. Problems met during the work, and how they were handled

Problem	What was done
Earlier session's bill-photo work was never saved and was lost	Rebuilt from the plan and tested again
Supabase free plan allows only two projects	Vault placed inside the Fingertip project, in its own section
The name "vault" is reserved by Supabase	Section named `customer_vault`, folder `customer-vault`
Supabase's approval question kept timing out	Most parts sent in small pieces; you pasted the last piece in the SQL Editor
Phone copy-paste cut long code short	Split into a short final piece (109 lines), which worked
"Exposed schemas" nearly saved without `public`	Caught before saving; all three ticked
Page reload showed a blank invoice form	Fixed: the saved invoice now stays in the address
Vault database not recorded in Fingertip's code	Matching files and change records added

9. What comes next

1. Choose a sign-in fix (A, or A and B).
2. Write the short security basics page.
3. Build the Vault screens inside Rx Fingertip: GST invoice, bill photo reading, Profit & GST, shop documents.
4. Put the bill reading service online.
5. Bring the same buttons and the Vault to Fingertrip.biz AI.
6. Try it with 3 chemists and 3 patients, then fix what they cannot find.

10. Technical details

Code and releases

Repository	What changed
Sridhar-2222/rx-at-your-fingertips	Change #88 merged and published: buttons-only homes for all users, `/help`, `/my-records`, owner-only panels, Vault migration records
Sridhar-2222/universal-customer-vault	Change #1 merged (bill photos, OCR fixes); migrations 0001–0006 in `customer_vault`; 99 SQL tests; OCR service and benchmark; handover notes
Sridhar-2222/Medical-Store-Final-Complete	Fingertrip.biz AI (BizCore) on side branches; not changed

Database (Supabase project fsftbvchnifshndssowe)

Item	Detail
Vault section	`customer_vault`: 16 tables, about 51 functions, row rules on every table, read-only access for signed-in users, writes only through checked functions
File folder	`customer-vault` (private), 5 storage rules named `cv_*`
Change records	`20261107174819` schema · `20261107183000` accounting and bill files · `20261108010000` link to Fingertip shops
Data API	Exposed schemas: public, graphql_public, customer_vault
Verification	Live structure fingerprint-matched to the tested copy (only two code comments differ); Fingertip's 71 tables untouched

Tests run

Test	Result
Rx Fingertip app tests (bun)	623 pass, 0 fail
Rx Fingertip type check and build	Clean
Rx Fingertip SQL access tests	425 pass, with the Vault included
Vault SQL access tests	99 pass (including 12 for the shop link and 3 for separation from Fingertip)
Vault logic tests	42 pass
Vault browser test (bill photo flow)	16 of 16 steps pass
Screenshots of every new home	Taken with made-up accounts; no live data used; no page errors
Live site check	New Help page found in the published site's code

Original requirements: docs/HANDOVER-FROM-CHATGPT.md in the Vault repository. Fingertip plans: Google Drive, "Rx Fingertip Complete Plan" (21 Oct 2026). Easy-to-read version of this report: claude.ai/artifact/7V5vELntfCogD7W9Lc3TvS.
